Belief Prep Pipeline
packages/cognitive/beliefs/refiner.py | orchestrator.py
input
"Universal Basic Income should be implemented"
DSPy Calls
ValueExtractor
BeliefGenerator (x2)
Refinement (recursive)
V2 Research (per belief)
ArgumentGenerator
topic
Stage 1: Value Extraction
DSPy: ValueExtractor
Values
Safety & harm prevention
Economic competitiveness
Individual autonomy
Social welfare
values
Stage 2: Belief Generation (D1)
DSPy: BeliefGenerator
AFF Beliefs
NEG Beliefs
Regulatory frameworks enable safer adoption
Clear guidelines reduce liability uncertainty
Regulations stifle innovation
Government oversight is too slow
root beliefs
Stage 3: Belief Refinement (D2+)
Recursive Decomposition
depth < max?
yes
yes
Break into components
Add conditions/context
Recursive Tree (D2+)
D1: Root beliefs
D2a: Sub-belief
D2b: Sub-belief
leaf beliefs
Stage 4: Research (per belief)
V2 Research Pipeline
