4-Stage Speech Generation Pipeline
packages/debate/pipeline/unified_pipeline.py
Inputs
Debate Context
Topic
Side (AFF/NEG)
AC, NC, 1AR, NR, 2AR
Named tactics:
- Spread
- Kritik
- Counterplan
- etc.
From FlowStudy:
- Standing args
- Clash points
- Priorities
From BeliefTree:
- Pre-researched beliefs
- Arguments
- Evidence
Stage 1: Tactic Selection
DSPy: SelectTactic
Exploration Mode
Use named tactics from playbook
Try variations of known tactics
Generate novel move sequences
TacticSelection
primary_tactic_id

opponent_prediction
word_budget_allocation
exploration_level (0-1)
tactic strategy
Stage 2: Skeleton Building
DSPy: BuildSkeleton
Belief Grounding
uniqueness / link impact / solvency
has_preloaded_evidence
ArgumentSkeleton
thesis
List[SkeletonClaim]
transitions
voting_issues
evidence_gap detected
V2 Research Pipeline (if evidence gaps)
Multi-hop Tavily
skeleton claims
new cards
Stage 3: Evidence Selection
Phase 1: Article Selection
DSPy: SelectEvidence
Filter articles by claim
Phase 2: Sentence Selection
DSPy: SelectSentences
line_start, line_end
EvidenceSelection
claim_evidence_map
overall_strength
adaptation_notes
selected evidence
Stage 4: Speech Generation
DSPy: GenerateSpeech
Execute Skeleton
Integrate evidence
Add signposting
Maintain flow
