Debate Metadata
Topic
Skeleton artifacts
Evidence selections
Layer 1: Dimensional Judges (Parallel)
Argument Strength
Evidence Quality
Clash Analysis
Language Clarity
Question Quality
Answer Defense
Per-Speech Scores
per-speech scores
Layer 2: Chronicler
Maintains per-speech analysis history
Argument Tracking
Standing
Attacked
Dropped
Extended
argument flow
Layer 3: Pipeline Forensics
Failure Attribution
Wrong strategy selected
Poor argument structure
Weak/irrelevant evidence
Poor speech delivery
Where did generation quality break down?
failure attribution
stage attribution
Layer 4: Meta-Judge
Detect judge bias patterns
Adjust for bias + noise
Weighted aggregation
Winner + Margin + Reasoning
final
winner + margin
Output: JudgeEvaluation
Decision
AFF or NEG
0-10 (decisiveness)
Explained decision
